"Seasoning wood with the Sun... an introduction to Solar Kiln Design and Operation"

We hear a lot about renewable energy and how we urgently need to cut back on fossil fuels to save the planet from self destructing. We all know the debate is wide ranging, and it's difficult to know what we can do as individuals which will have any real effect, particularly when we see our government doing very little. Well, for a woodland owner, a saw-miller or for a small furniture or joinery business or for someone who just enjoys woodcraft, using a wood kiln which is powered by Solar Energy is a very good start.

If you would like to know more about Solar Kilns why not join us on one of these short one day courses. It will be a practical introduction to drying wood using a Solar Kiln and also an opportunity to meet others with similar ideas.

The course will cover:-

The principles of timber drying and how a Solar Kiln works.

How a Solar kiln is designed and constructed and how it should be operated to obtain a high quality product.

Course Dates:- During 2006 - dates to be confirmed. The course will start at 10.30am and finish at about 4:30pm

Location:- Jonathan Guest Furniture, The Old School, Glanrhyd, Cardigan, Pembrokeshire SA43 3PA

Cost:- £45 including buffet lunch and refreshments.

Booking your place:- You can either book you place on one of these courses by sending your remittance to me by post or book online at www.jonathan-guest.co.uk/solar-kiln.htm.

Future course:- If you are interested in this course but you are unable to come on one of these days please let me know. We plan to arrange further courses in the near future.
